Big Data Analytics (303105361)

Assignment 2

Chapter 2: NoSQL Data Management

5 Marks Questions

1. Explain NoSQL databases and their advantages over traditional databases.
2. Compare SQL, NoSQL, and NewSQL databases.
3. Explain different types of NoSQL databases with examples.
4. Describe key-value and document data models in NoSQL.
5. Explain Map-Reduce and partitioning in NoSQL databases.

4 Marks Questions

1. Why is NoSQL required in Big Data applications?
2. Explain aggregate-oriented databases.
3. Describe graph databases with suitable examples.
4. Explain the advantages of NoSQL databases.
5. Explain partitioning and combining in distributed databases.

2 Marks Questions

1. Define NoSQL.
2. What is a key-value database?
3. Define document database.
4. What is a graph database?
5. Expand NewSQL.
6. State any two advantages of NoSQL.
7. What is Map-Reduce?
8. Define partitioning.
9. What are aggregates in NoSQL?
10. Give two examples of NoSQL databases.
